PROGRAM KONTROLE I OSIGURANJA KVALITETE UGRAĐENOG MATERIJALA I IZVEDENIH RADOVA

OPĆENITO

Građevinski projekt izrađen je u skladu s "Tehničkim propisom za građevinske konstrukcije" (NN br. 17/17), odnosno prema važećim propisima.

Program kontrole i osiguranja kvalitete materijala je izrađen u skladu s "Zakonom o gradnji" (NN 153/13, 20/17, 39/19, 125/19) i "Zakonom o građevnim proizvodima" (NN RH br.76/13, 30/14, 130/17, 39/19), te s važećim hrvatskim normama i propisima u građevinarstvu.

Svi sudionici u građenju, a to su Investitor, Projektant, Izvoditelj, Nadzorni inženjer i Revident su dužni pridržavati se odredbi navedenog zakona.

A BETONSKI I ARMIRANO BETONSKI RADOVI

VRSTE BETONA, MATERIJALI, OZNAKE

Vrste betona – Razred tlačne čvrstoće odrediti će se prema razredu izloženosti betona (HRN EN 1991-1-1 tablica 4.1)

Agregat – Ugrađivat će se drobljeni separirani agregat sukladan zahtjevima priloga «D» TPBK.

Cement – Ugrađivat će se cement specificiran prema normi HRN EN 197-1/2000/A1, sukladan zahtjevima priloga «C»TPBK, odnosno Tehničkog propisa za cement za betonske konstrukcije.

Voda – iz vodovoda sukladna zahtjevima priloga «F»TPBK i normi HRN EN 1008:2002.

Isprave o sukladnosti osnovnih materijala – za sve rabljene materijale izvoditelj je dužan priložiti izjave o sukladnosti ili certifikate sukladnosti

A.1. PROGRAM KONTROLE KVALITETE

A.1.1. KONTROLA PROIZVODNJE BETONA

Unutarnja kontrola proizvodnje betona provodit će se prema normi HRN EN 206-1 i mora obuhvatiti sve mjere nužne za održavanje i osiguranje svojstva betona sukladno zahtjevima norme HRN EN 206-1 i prilogu «A»TPBK.

A.1.2. KONTROLNI POSTUPCI KOD UGRADNJE BETONA

Izvoditelj mora prema normi HRN EN 13670:2010 prije početka ugradnje provjeriti da li je beton u skladu sa zahtjevima iz projekta betonske konstrukcije, te da li je tijekom transporta došlo do promjene njegovih svojstava koja bi bila od utjecaja na tehnička svojstva betonske konstrukcije.

A.1.2.1. SVJEŽI BETON

Kontrolu svježeg betona izvoditelj treba provoditi pregledom svake otpremnice i vizualnom kontrolom konzistencije kod svake dopreme (svakog vozila), te kod opravdane sumnje ispitivanjem konzistencije prema normi HRN EN 12350-2 (ispitivanje svježeg betona slijeganjem) o čemu treba voditi evidenciju.

A.1.2.2. OČVRSNULI BETON

Ispitivanje očvrsnulog betona će se provoditi na uzorcima uzetim tijekom izvođenja radova, a u opsegu određenom programom u prilogu. Ispitivanje očvrsnulog betona se sastoji od ispitivanja:

- Tlačne čvrstoće prema HRN EN 12390-3.

Uzorci će se uzimati i njegovati u skladu s HRN EN 12390-2. Uzorci su oblika kocke dimenzija 15x15x15 cm.

Rezultati ispitivanja će se evidentirati redoslijedom kako su uzimani. Evidentirani rezultati će se grupirati u grupe betona. Grupe betona su definirane u programu uzimanja kontrolnih betonskih uzoraka.

A.2. IZVOĐENJE BETONSKIH RADOVA

A.2.1. TRANSPORT BETONA

Transport projektiranog betona će se vršiti automješalicama, pri čemu moraju biti zadovoljeni svi zahtjevi iz tehničkih uvjeta projekta.

Transportna sredstva ne smiju izazivati segregaciju betonske smjese tijekom vožnje od mjesta proizvodnje do mjesta ugradnje.

Vrijeme transporta i drugih manipulacija sa svježim betonom mora biti u neposrednoj vezi s vremenom početka vezivanja cementa prema zahtjevima HRN EN 206-1/2000.

A.2.2. UGRAĐIVANJE BETONA (prema HRN EN 13670:2000)

S betoniranjem se može početi samo na osnovu pismene potvrde o preuzimanju podloge, armature i odobrenju betoniranja od strane nadzornog inženjera.

Beton se mora ugrađivati sistematski i programirano prema određenom planu i odabranoj tehnologiji (kran-beton, pumpani beton).

Zabranjeno je korigiranje vode u svježem betonu bez prisustva tehnologa betona.

Prije betoniranja treba oplatu polijevati. Pri polijevanju oplata u tijeku betoniranja treba voditi računa da voda ne uđe u betonsku masu.

Beton treba ubacivati što bliže njegovom konačnom položaju u konstrukciji da bi se izbjegla segregacija. Nije dozvoljeno transportirati beton pomoću pervibratora. Svaki započeti konstruktivni dio ili element mora biti izbetoniran neprekinuto u započetoj opsegu, kako to predviđa program betoniranja, bez obzira na radno vrijeme, vremenske promjene ili isključenje pojedinih uređaja mehanizacije iz pogona.

A.2.3. UGRAĐIVANJE BETONA U POSEBNIM UVJETIMA

Ugrađivanje betona u kalupe ili oplatu pri vanjskim temperaturama ispod +5 ili iznad +30°C se smatra betoniranjem u posebnim uvjetima. Za betoniranje u posebnim uvjetima se moraju osigurati posebne mjere zaštite betona, treba rabiti dodatke protiv smrzavanja betona. Prije prvog smrzavanja beton mora imati najmanje 50% zahtijevane čvrstoće. Kad se u vrlo hladnim danima skida oplata, ne smije doći do naglog hlađenja betona te se vanjske površine betona moraju zaštititi.

Pri betoniranju na visokim temperaturama početnu obradivost treba odrediti prema prethodno utvrđenom gubitku obradivosti prilikom transporta i ugradnje. U slučaju dužeg transporta ili spore ugradnje betona treba rabiti dodatke- usporivače vezivanja.

Cement i sastav betona koji se ugrađuju u masivne elemente moraju biti takvi da ni u kom slučaju temperatura betona ugrađenog u masu elementa ne bude iznad $+65^{\circ}\text{C}$. U protivnom se poduzimaju mjere za hlađenje komponenata betona ili hlađenje betona u samom elementu.

A.2.4. NJEGOVANJE UGRAĐENOG BETONA

Neposredno nakon betoniranja beton će se zaštićivati od:

- oborina i tekuće vode-prekrivanjem ceradama ili najlonom
- vibracija koje mogu utjecati na promjenu unutrašnje strukture i prionjivost betona i armature, kao i drugih mehaničkih oštećenja u vrijeme vezivanja i početnog očvršćivanja

Zaštitu od prebrzog isušivanja treba provoditi mokrim postupkom (polijevanjem, prekrivanjem filcom ili jutom), a u trajanju do najmanje 7 dana ili do postizanja 60% tražene čvrstoće. Zaštita betona mora biti ukalkulirana u jedinične cijene.

A.3. OCJENA POSTIGNUTE KVALITETE

A.3.1. OCJENA SUKLADNOSTI BETONA

Beton mora zadovoljavati kriterije identičnosti u skladu s prilogom «J»TPBK –a i tablici B.1 HRN EN 206–1

- primjenjuje se za grupu do 6 rezultata ispitivanja tlačne čvrstoće
- grupe od po tri uzastopna rezultata ispitivanja (x_1, x_2, x_3)

Beton se prihvaća ako je ispunjen navedeni kriterij identičnosti. Ako taj kriterij nije zadovoljen, predložiti će se naknadni dokaz kvalitete betona koji odredi nadzorni inženjer.

KRITERIJI IDENTIČNOSTI TLAČNE ČVRSTOĆE

Beton certificirane kvalitete proizvodnje

Identičnost betona se ocjenjuje za svaki pojedini rezultat tlačne čvrstoće i srednju vrijednost od «n» pojedinih rezultata koji se ne preklapaju kako je naznačeno u tablici B.1

Smatra se da beton pripada sukladnom skupu ako su oba kriterija iz tablice B.1 zadovoljena za «n» rezultata dobivenih ispitivanjem čvrstoće uzoraka betona uzetih iz definirane količine betona.

Tablica B.1- Kriteriji identičnosti tlačne čvrstoće

| Broj «n» rezultata ispitivanja tlačne čvrstoće definirane količine betona | Kriterij 1 | Kriterij 2 |
|---|---|---|
| | Srednja vrijednost od «n» rezultata (f_{cm}) N/mm ² | Svaki pojedini rezultat (f_{ci}) N/mm ² |
| 1 | Nije primjenjiv | $\geq f_{ck} - 4$ |
| 2-4 | $\geq f_{ck} + 1$ | $\geq f_{ck} - 4$ |
| 5-6 | $\geq f_{ck} + 2$ | $\geq f_{ck} - 4$ |

U slučaju proizvodnje betona u tvornici koja još nema certificiranu kvalitetu proizvodnje, za ocjenu će se primjenjivati kriterij sukladnosti tlačne čvrstoće naveden u tablici 14 sadržanoj u točki 8.2.1.3 norme HRN EN 206-1/2006.

B. SKELE I OPLATE

B.1. Osnovni zahtjevi

Skele i oplata, uključujući njihove potpore i temelje, treba projektirati i konstruirati tako da su:

- otporne na svako djelovanje kojem su izložene tijekom izvedbe,
- dovoljno čvrste da osiguraju zadovoljenje tolerancija uvjetovanih za konstrukciju i spriječe oštećivanje konstrukcije
- oblik, funkcioniranje, izgled i trajnost stalnih radova ne smiju biti ugroženi ni oštećeni svojstvima skela i oplata te njihovim uklanjanjem.
- Skele i oplata moraju zadovoljavati mjerodavne hrvatske i europske norme kao što je EN 1065.

B.2. Materijali

B.2.1. Općenito

Može se upotrijebiti svaki materijal koji će ispuniti uvjete konstrukcije ovih tehničkih uvjeta. Moraju zadovoljavati odgovarajuće norme za proizvod ako postoje. U obzir treba uzeti svojstva posebnih materijala.

B.2. Oplatna ulja

Oplatna ulja treba odabrati i primijeniti na način da ne štete betonu, armaturi ili oplati i da ne djeluju štetno na okolinu. Nije li namjerno specificirano, oplatna ulja ne smiju štetno utjecati na valjanost površine, njezinu boju ili na posebne površinske premaze. Oplatna ulja treba primjenjivati u skladu s uputama proizvođača ili isporučitelja.

B.3. Skele

Projekt skele treba uzeti u obzir deformacije tijekom i nakon betoniranja kako bi se izbjegle štetne pukotine u mladom betonu. To se može postići:

- ograničenjem progibanja i/ili slijeganja,
- kontrolom betoniranja i /ili specificiranjem betona npr. usporavanjem ugradnje.

B.4. Oplate

Oplata treba osigurati betonu traženi oblik dok ne očvrstne.

Oplata i spojnice između elemenata trebaju biti dovoljno nepropusni da spriječe gubitak finog morta. Oplatu koja apsorbira značajniju količinu vode iz betona ili omogućava evaporaciju treba odgovarajuće vlažiti da se spriječi gubitak vode iz betona, osim ako nije za to posebno i kontrolirano namijenjena. Unutarnja površina oplata mora biti čista. Ako se koristi za vidni beton, njezina obrada mora osigurati takvu površinu betona.

B.5. Posebne oplate

Pri izvedbi konstrukcije kliznom oplatom, projekt takvog sustava mora uzeti u obzir materijal oplata i osigurati kontrolu geometrije radova. Za osiguranje traženog zaštitnog sloja betona, usklađenog s tolerancijama definiranim ovim tehničkim uvjetima, treba koristiti odgovarajuće vodilice ili distancere oplata od armature.

B.6. Površinska obrada

Posebnu površinsku obradu betona, ako se traži, treba utvrditi projektnim specifikacijama. Za prihvaćanje zadane kvalitete površinske obrade mogu biti uvjetovani pokusni betonski paneli. Vrsta i kvaliteta površinske obrade ovise o tipu oplata, betonu (agregatu, cementu, kemijskim i mineralnim dodacima), izvedbi i zaštiti tijekom izvedbe.

B.7. Oplatni ulošci i nosači

Privremeni držači oplata, šipke, cijevi i slični predmeti koji će se ubetonirati u sklop koji se izvodi i ugrađeni elementi kao npr. ploče, ankeri i distanceri trebaju:

- biti čvrsto fiksirani tako da očuvaju projektirani položaj tijekom betoniranja,
- ne uzrokovati neprihvatljive utjecaje na konstrukciju,
- ne reagirati štetno s betonom, armaturom ili prednapetim čelikom,
- ne uzrokovati neprihvatljivi površinski izgled betona,
- ne uzrokovati neprihvatljivi površinski izgled betona,

Svaki ugrađeni dio treba imati dovoljnu čvrstoću i krutost da zadrži oblik tijekom betoniranja. Ne smije sadržavati tvari koje mogu štetno djelovati na njih same, beton ili armaturu.

Udubljenja ili otvore za privremene radove treba zapuniti i završno obraditi materijalom kakvoće slične okolnom betonu, osim ako ne ostaju otvoreni ili im je drugi način obrade specificiran.

B.8. Otpuštanje skela i uklanjanje oplata

Skele ni oplata se ne smiju uklanjati dok beton ne dobije dovoljnu čvrstoću:

- otpornu na oštećenje površine skidanjem oplata,
- dovoljnu za preuzimanje svih djelovanja na betonski element u tom trenutku,
- da izbjegne deformacije veće od specificiranih tolerancija elastičnog ili neelastičnog ponašanja betona.

Uklanjanje oplata treba izvoditi na način da se konstrukcija ne preoptereći i ne ošteti. Opterećenja skela treba otpuštati postupno tako da se drugi elementi skele ne preoptereće. Stabilnost skela i oplata treba održavati pri oslobađanju i uklanjanju opterećenja. Postupak podupiranja ili otpuštanja kad se primjenjuje za reduciranje utjecaja početnog opterećenja, sukcesivno opterećenje i/ili izbjegavanje velike deformacije treba detaljno utvrditi.

C. ARMATURA I UGRADNJA ARMATURE

Armatura izrađena od čelika za armiranje prema odredbama ugrađuje se u armiranu betonsku konstrukciju prema projektu betonske konstrukcije, normi HRN ENV 13670:2010, normama na koje ta upućuje.

Rukovanje, skladištenje i zaštita armature treba biti u skladu sa zahtjevima tehničkih specifikacija koje se odnose na čelik za armiranje, projekta betonske konstrukcije te odredbama ovoga Priloga.

Izvođač mora prema normi HRN EN 13670:2010 prije početka ugradnje provjeriti je li armatura u skladu sa zahtjevima iz projekta betonske konstrukcije, te je li tijekom rukovanja i skladištenja armature došlo do njezinog oštećivanja, deformacije ili druge promjene koja bi bila od utjecaja na tehnička svojstva betonske konstrukcije.

Nadzorni inženjer neposredno prije početka betoniranja mora:

- provjeriti postoji li isprava o sukladnosti za čelik za armiranje, odnosno za armaturu i jesu li iskazana svojstva sukladna zahtjevima iz projekta betonske konstrukcije,
- provjeriti je li armatura izrađena, postavljena i povezana u skladu s projektom betonske konstrukcije te u skladu s Prilozima »B« te dokumentirati nalaze svih provedenih provjera zapisom u građevinski dnevnik.

C.1. Materijali

Čelik za armiranje betona treba zadovoljavati uvjete HRN EN 10080 i uvjete projekta konstrukcije. Svaki proizvod treba biti jasno označen i prepoznatljiv. Sidreni i spojni elementi trebaju zadovoljavati uvjete HRN EN 1992-1-1 i uvjete projekta.

Površina armature mora biti očišćena od slobodne korozije i tvari koje mogu štetno djelovati na čelik, beton ili vezu između njih. Galvanizirana armatura može se koristiti samo u betonu s cementom koji nema štetnog djelovanja na vezu s galvaniziranom armaturom.

C.2. Savijanje, rezanje, prijevoz i skladištenje

Čelik za armiranje betona treba rezati i savijati prema projektnim specifikacijama. Pri tome:

- savijanje treba izvoditi jednolikom brzinom,
- savijanje čelika pri temperaturi ispod -5°C , ako je dopušteno projektnim specifikacijama, treba izvoditi uz poduzimanje odgovarajućih posebnih mjera osiguranja,
- savijanje armature grijanjem smije se izvoditi samo uz posebno odobrenje u projektnim specifikacijama.

Promjer trna za savijanje šipki treba biti prilagođen stvarnom tipu armature

Architectural drawing showing a structural frame or section of a building. The drawing includes numerous structural elements, beams, and columns, with labels indicating dimensions and levels. The drawing is oriented horizontally, with the building's length extending from left to right. The roof structure is highly detailed, showing a series of intersecting lines representing the roof's geometry. The walls are shown as vertical lines, and the floor is indicated by a horizontal line at the bottom. The drawing is a technical architectural plan, likely a structural frame or a detailed section of a building.

[illegible]
